EXECUTIVE SUMMARY

Engineering Leader with 17 years of experience building and scaling high-performance organizations across Healthcare AI, Cybersecurity, and AdTech & Samsung Products. UCLA Anderson Executive MBA and BITS Pilani M.S. in Software Engineering — a combination that enables both rigorous systems thinking and sharp business decision-making. Proven track record of translating business strategy into executable technology roadmaps: leading build-vs-buy evaluations, driving vendor negotiations, managing P&L impact, and designing org structures that scale. Delivered measurable outcomes including \$2.1M+ in cost savings, 240% improvement in AI project delivery, and 90%+ accuracy in AI-generated clinical documentation. Operates effectively at the intersection of platform strategy and cross-functional execution — bridging engineering, product, and clinical stakeholders to ensure teams are building the right things, the right way, at scale.

LEADERSHIP PHILOSOPHY

"I believe great teams operate as a system, not silos — driven by shared goals, clear communication, and engineers who take end-to-end ownership across boundaries to solve meaningful problems. I hold teams accountable for the full lifecycle: from model selection and architecture to deployment, reliability, and continuous improvement in Ai-world settings."

HOW I LEAD & OPERATE

DIMENSION	HOW I OPERATE	AI TOOL
Sprint & Delivery	Outcome-driven sprints with proactive risk management, daily alignment, and clear ownership — ensuring predictable delivery across concurrent initiatives.	Rovo AI in Jira — AI-assisted sprint planning, ticket summarisation, and delivery insights
Roadmap Planning	Data-driven roadmaps balancing feature delivery, tech debt, and scalability — anchored to platform strategy and business outcomes (UCLA Anderson).	Rovo AI in Jira — roadmap tracking, dependency mapping, and stakeholder reporting
Developer Productivity	AI-augmented engineering workflows enabling teams to ship faster with higher consistency and reduced cognitive overhead.	Windsurf — AI code generation, context-aware pair programming, automated code reviews
Customer Intelligence	Leverage product adoption signals and customer health data to align engineering priorities to real-world clinical user behaviour.	Gainsight — customer health scoring, NPS trends, usage analytics for roadmap decisions
Platform Observability	Full-stack monitoring with AI-driven anomaly detection and automated incident response, maintaining 99.9% uptime across production systems.	Dynatrace — AIOps, distributed tracing, real-time infrastructure & app performance
Org Design & Standards	Build-vs-buy frameworks, capacity planning, career ladders, and engineering excellence programs designed to scale without losing accountability.	BITS Pilani systems rigour + UCLA Anderson management frameworks

CORE COMPETENCIES

◆ Engineering Org Scaling (5→50+)	◆ AI/ML Strategy & Platform Architecture	◆ Cross-Functional Stakeholder Alignment
◆ AI Governance & Responsible AI	◆ MLOps & Production ML Systems	◆ P&L Ownership & Technology ROI
◆ Product-Engineering Partnership	◆ Vendor & Outsourcing Management	◆ Talent Development & Retention

CAREER EXPERIENCE

Senior Engineering Manager > NextGen Healthcare

Jul 2023 – Present

Healthcare AI Platform | 18-member AI/ML team | Bangalore, India

- Established and led an AI Center of Excellence with 18 AI/ML specialists, accelerating AI project delivery by 240% and setting organization-wide standards for model governance and responsible AI.
- Led the strategic evaluation and selection of a next-gen Speech Recognition Engine — a classic build-vs-buy decision informed by my UCLA Anderson MBA training. Assessed mModal, Google SRE, and Nabla across accuracy, latency, scalability, and AI roadmap fit; drove executive alignment and standardized on Nabla, coordinating migration across Mavericks, mobile, and backend teams to deliver a modern AI-native dictation platform.
- Owned delivery alignment across Ambient Assist, Digital Scribe, and NGO integrations — facilitating cross-team discussions to clarify ownership, resolve conflicts, and ensure execution stayed on track across multi-quarter concurrent initiatives.
- Enabled speech-to-text + LLM workflows powering Digital Scribe — automated SOAP note generation, macro expansion, and clinical decision support features that directly reduce physician documentation burden.
- Architected and shipped the Ambient SDK Stream, Cloud Ingestion pipeline, ASR/STT layer, and AWS Serverless infrastructure — applying BITS Pilani-trained systems engineering rigour to achieve 90%+ accuracy in AI-generated clinical documentation.
- Drove \$2.1M+ in cost savings through infrastructure optimization, vendor contract alignment, and a 35% improvement in API response times — directly managing P&L impact of platform modernization decisions.
- Led capacity planning and resource allocation across multiple teams, matching engineering headcount to high-priority initiatives and maintaining delivery continuity through organizational change.
- Maintained full team stability and zero attrition through a high-pressure multi-quarter transformation — a direct outcome of the coaching culture and psychological safety I actively build.
- Mentored senior engineers to take end-to-end ownership of complex backend and integration workflows; rehabilitated underperforming engineers from other teams who went on to deliver successfully on Ambient and Digital Scribe.
- Pioneered AI-powered mobile test automation for iOS and Android, fully eliminating dedicated QA/QE headcount dependency — cutting QA cycle time by 60%+ and transitioning to a fluid Pod model where QA members rotate across teams for broader coverage.
- Built engineering best practices across the org: outcome-driven retrospectives, escalation hygiene, release readiness gates, and clear ownership frameworks — measurably reducing production risk across all concurrent releases.
- Leveraged Windsurf for AI-assisted code generation (2x feature velocity), Gainsight for customer health scoring and roadmap prioritization, and Dynatrace for AI-driven full-stack observability achieving 99.9% platform uptime.

Software Engineering Manager > Ivanti

Jun 2021 – Jun 2023

Enterprise Mobility / UEM | 27-engineer team | Bangalore, India | Reporting to Director of Engineering

- Directed R&D teams across US, India, and Belarus (Minsk) for Ivanti's UEM and endpoint security product suite — Docs@Work, Web@Work, Email+, and FilePass.
- Personally built the India Engineering Center from the ground up — scaling from 5 to 27 engineers across iOS, Android, and macOS verticals in under two years; designed and owned the full hiring pipeline including sourcing strategy, technical interview frameworks, and offer calibration.
- Introduced structured engineering people processes that did not previously exist in the India center: career ladders with clear leveling criteria, a structured 1:1 framework, and bi-annual performance review cycles — establishing the organizational infrastructure for a high-accountability, growth-oriented team.
- Upheld high-quality engineering standards (agile, TDD, shift-left testing) delivering product releases consistently on time and within budget across three geographies.
- Received the Best Project Award (2022) for outstanding delivery and cross-functional collaboration on a critical enterprise mobility initiative.

Technical Lead Engineer > Groundtruth

Jul 2019 – Jun 2021

AdTech & Location Intelligence | Gurugram, India | Extended US engagements: NYC, Mountain View & San Francisco

- Engineered a first-of-its-kind AR feature mapping all Points of Interest (POIs) across DLF Cyber City, Gurugram — enabling users to discover restaurants, cafes, and retail outlets through a real-time Augmented Reality overlay. Presented this live at NASSCOM as a flagship demo of AR's commercial viability in location-based advertising.
- During US engagements in Mountain View and San Francisco, collaborated with venue partners to physically place location nodes at key sites including the Martin Luther King Hall — engineering blackout regions at elevated levels using x, y, and z axis coordinates within the Groundtruth Location SDK.
- Led Location SDK Framework development and WeatherBug native-to-hybrid migration; integrated Firebase, Google Analytics, Taboola, and Nimbus attribution frameworks.
- NASSCOM Speaker — presented on Augmented Reality in AdTech with a live demo; session archived at nasscom.in and YouTube.

Lead Engineer ▶ Samsung R&D India

Nov 2014 – Jul 2019

B2B Displays — Samsung FLIP/eBoard, MagicInfo, LFD | ~2.5 years embedded at Samsung HQ, Suwon, South Korea

- One of the earliest engineers on Samsung FLIP (eBoard) — joined when it ran on Windows (C++, wxWidget) and carried it through the full OS transition to Tizen (2016–2018), directly shaping the architecture of what became a globally shipped commercial product.
- Built the Samsung client application (C/C++ on Windows and Linux) enabling USB and Wi-Fi screen and data sharing across multiple simultaneous clients — a core component of Samsung's B2B interactive display ecosystem deployed across enterprise and public-sector installations.
- Led LFD deployments at DLF Promenade PVR ICE, Delhi and Noida Logix Mall PVR — overseeing end-to-end public installation and validation.
- Spent ~2.5 years across multiple 3–6 month rotations at Samsung HQ Suwon, South Korea — embedded directly with Korean engineering teams through requirement gathering, architecture alignment, and cross-geo implementation cycles. The Korean engineering culture — exceptional precision, long hours, rigorous documentation, and zero tolerance for ambiguity — is the single greatest influence on how I set standards and hold teams accountable today.
- Developed applications for MagicLWB Agent and MagicInfo Express across Windows, Linux, iOS, and Android — contributing to Samsung's wider B2B display and signage portfolio alongside the FLIP/eBoard flagship.
- Awards: Project of the Year (2016 & 2017), GWP Champion of the Year (2016), Appreciation Award (May & Sep 2015).

Earlier Career Senior Software Engineer – Classic Informatics (2014) | Senior iOS Developer – RAYZ Infotech (2013–14) | iOS Developer – IAPP Technologies (2011–13)

EDUCATION

2022	Executive MBA, General Management UCLA Anderson School of Management, Los Angeles
2017	Master of Science, Software Engineering BITS Pilani
2011	Bachelor of Science, Computer Science & Engineering Punjab Technical University

CERTIFICATIONS & AWARDS

Certifications - Post Graduate Program in AI & Machine Learning – Caltech (2024) - Responsible AI for Digital Leaders – Google Cloud (2024) - Databricks Certified Generative AI Engineer Associate (2024) - Databricks Generative AI Fundamentals (2024)	Awards - Best Project Award – Ivanti (2022) - Project of the Year – Samsung (2016 & 2017) - GWP Champion of the Year – Samsung (2016) - Appreciation Award – Samsung (May & Sep 2015)
--	--

TECHNICAL LANDSCAPE

AI / ML	TensorFlow, PyTorch, Keras, Scikit-learn, Hugging Face, OpenAI APIs, LLMs, BERT, GPT, Whisper, Nbla AI, mModal
MLOps	MLflow, Kubeflow, Azure ML, AWS SageMaker, Databricks ML, Windsurf, Dynatrace, Gainsight
Cloud & Infra	AWS Serverless, AWS Amplify, Azure Cognitive Services, Google AI Platform, Snowflake, Databricks, Kafka, Spark, Airflow
Mobile / Web	iOS (Swift, Obj-C), Android (Java), React Native, Flutter, ReactJS, NodeJS, Cordova
DevOps / Tools	GitHub, GitLab, Rovo AI in Jira, Jenkins, Gradle, Selenium, AWS Device Farms, TDD, Shift-Left Testing
Languages	Python, R, Swift, Objective-C, Java, JavaScript, C, C++

GLOBAL EXPOSURE & THOUGHT LEADERSHIP

- NASSCOM Speaker — Presented on Augmented Reality in AdTech with a live demo; session archived at nasscom.in and YouTube.
- Published author on Medium (medium.com/@tejeshwargill) covering mobile technology and AI trends.
- Global tenures — New York (One World Trade Center), Mountain View & San Francisco (CA), London (UK), Samsung HQ Suwon (South Korea).
- Side Project — Ellu (InfroLabs, Madrid): Led architecture and full-stack engineering of an end-to-end encrypted chat platform for iOS & Android, adopted by 400+ enterprise customers across the EU — built independently alongside full-time commitments, demonstrating entrepreneurial drive and end-to-end product ownership.
- Regular speaker and writer on emerging technology — published on Medium (medium.com/@tejeshwargill) covering AI, mobile architecture, and engineering leadership; sessions and demos archived publicly on nasscom.in and YouTube.
